

## **ProLion High Availability solution for SAP now available on AWS Marketplace**

*ClusterLion is a simplified highest availability cluster solution for SAP HANA DBs and SAP NetWeaver Application Server and is now available on the AWS and Microsoft Azure Marketplaces.*

[ProLion](#), a best-in-class proactive ransomware and data protection solution provider for ONTAP storage, has today announced the availability of its ClusterLion for SAP on the AWS Marketplace. For the first time, ProLion customers can take advantage of the productive and trusted AWS cloud platform, with streamlined deployment and management.

ProLion ClusterLion for SAP HANA delivers the highest availability for SAP HANA and SAP NetWeaver, developed to implement automatic takeover, and deliver Always-on availability for SAP HANA environments. ClusterLion for SAP is the only solution that offers the very highest degree of availability and ensures data consistency at all times.

ProLion monitors affected clusters and ensures automatic takeover for SAP Hana databases and SAP Netweaver application servers. The solution also includes the potential for Automatic Takeover. If a failure is detected that requires a takeover, ClusterLion automatically switches to the replicated cluster without manual intervention or noticeable downtime.

The news means that ClusterLion for SAP is now available on the AWS Marketplace and Azure Marketplace.

Robert Graf, CEO at ProLion, stated:

“We are pleased to be able to make this announcement and deliver a High Availability solution to customers utilising Azure or AWS.

“SAP is the backbone of many companies across several industries including manufacturing, retail, and transport & logistics. Many of these businesses run 24/7 and therefore require Always-On Availability. ClusterLion ensures productivity continues with zero system downtime within SAP HANA and Application environments.”

ClusterLion has Always-on Availability for SAP Services and removes the need for complex clustering. It provides completely infrastructure-independent monitoring which results in the most reliable decision-making, a lower total cost of ownership (TCO) and the highest availability.

ClusterLion means there is no need for a 3rd Data Centre or shared storage and associated maintenance costs.

ClusterLion for SAP is a cloud-based quorum that analyses and correlates the status from both sides. If a failure is detected that requires a takeover, ClusterLion shuts down the primary side, establishes data consistency, and then initiates the takeover process.

The AWS Marketplace is an online market for buying and selling cloud solutions certified to run on AWS. The AWS Marketplace helps connect companies seeking innovative, cloud-based solutions with partners who have developed solutions that are ready to use.

## **Notes to editors**

### **About ProLion**

ProLion GmbH is a developer of ransomware protection and data integrity software solutions for any ONTAP focused storage environment and high-availability solutions for SAP and MetroCluster environments.

Founded in Austria, ProLion's best-of-breed CryptoSpike solution eliminates system downtime and data loss risk ensures that an organisations' data remains secure, compliant, manageable, and accessible.
